THE CUT — Barber Queue

Development Journal — 18 September 2026

Session Goal

Finish the queue-logic stage, verify estimated waiting-time functionality, and preserve the current design.

What We Completed

- Reviewed the current **index.html** and confirmed the Client and Barber structures are present.
- Reviewed the current **script.js** and confirmed the queue logic and service-duration system.
- Service durations are implemented: Haircut 30 min, Hair + Beard 45 min, Beard 20 min, Line Up 15 min.
- Estimated wait-time elements were added to the dynamically generated queue cards.
- The existing premium dark/glass design was kept unchanged because the user confirmed the design looks good.
- Queue persistence, barber actions, service-based waiting calculations, and refresh/state handling are in place.

Project Status

Foundation	✓ Complete
Client side	✓ Complete
Barber side	✓ Complete
Queue logic	✓ Complete
Estimated wait times	✓ Implemented
Local storage	✓ Complete
Refresh/state handling	✓ Complete
Design	✓ Good / preserved
Next	Day 5 testing

Technical Notes

- The prototype currently uses browser localStorage, so separate devices do not share the queue.
- Wait time is estimated from the service durations of customers ahead.
- A future version can calculate remaining time for a haircut already in progress.
- A future improvement can track the active customer's unique ID instead of matching by name.

Next Session — Day 5 Testing

- ■ Empty inputs
- ■ Multiple customers
- ■ Refreshes
- ■ Removing customers
- ■ Completing customers
- ■ Starting two customers

- Correct customer actions
- Different services
- Long names
- Mobile layout
- Unusual situations

Session Reflection

Today the project moved from basic functionality into a more structured prototype. The queue now has service-based timing, persistence, barber controls, and state handling while the visual design remains clean. The next priority is testing rather than adding more features. Once testing is complete, the project can move into professional polish and a barber demo.
